

LABH TECHNOLOGY

Labh Diamond Process House

Brings Diamond Into Life.

About Labh Technology

LABH TECHNOLOGY is a specialized manufacturer of diamond processing equipment, machinery and industrial solutions, serving the evolving needs of the global diamond industry. With a strong focus on engineering, innovation and processing technology, we develop advanced solutions for diamond boiling, deep boiling, diamond cleaning and specialized diamond processing.

Our product portfolio includes Diamond Boiling Machines, Deep Boiling Systems, NATTS Process Systems and Diamond Cleaning Machines, designed to support efficient, reliable and consistent diamond processing operations.

With extensive industry experience and a commitment to continuous technological development, LABH TECHNOLOGY combines precision engineering, practical diamond-processing expertise and innovative technology to deliver solutions tailored to professional processing requirements.

Our objective is simple — to develop dependable technology that helps diamond processors achieve greater efficiency, improved processing results and consistent quality.

Special Polki Diamond Slice Process

Polki is an uncut and unpolished diamond. For these diamonds, we have developed a new cleaning process which gives benefits to these diamonds and increases its value. In this process, our chemical deeply penetrates into the cracks and removes the dirt and impurities of the polki diamond, giving a better result and bringing whiteness and increasing the lustre.
